

# STORAGECRAFT™ SHADOWPROTECT™

GRANULAR RECOVERY FOR EXCHANGE

## Fast and Reliable Recovery, Migration and Simplified Management of Microsoft® Exchange Servers

ShadowProtect Granular Recovery for Exchange provides fast and reliable recovery & migration of Microsoft® Exchange mailboxes, e-mail messages and e-mail attachments. Recover individual or multiple mailboxes directly from Exchange server backups or migrate to new Exchange servers with ease.

With ShadowProtect Granular Recovery for Exchange, recover individual or multiple mailboxes from Exchange Database (EDB) files quickly and easily. The easy-to-use interface allows you to recover or migrate mailboxes, messages or attachments from an Exchange backup to a production Exchange server or PST file for fast recovery & migration.

ShadowProtect Granular Recovery for Exchange allows you to mount a point-in-time ShadowProtect backup image<sup>1</sup> that contains your Exchange EDB file and view all of your user's mailboxes; navigate and search a specific mailbox and drag-and-drop the entire mailbox or as many e-mail messages or e-mail attachments as you need to recover.

ShadowProtect Granular Recovery for Exchange simplifies migrating to a new Exchange server. Once your new Exchange server is online, simply create a point-in-time backup image with ShadowProtect, mount the Exchange EDB file in your backup image and drag-and-drop your users' mailboxes to the new destination Exchange server. Migration takes minutes, rather than hours or days.

ShadowProtect Granular Recovery for Exchange is a powerful search tool that allows you to search messages based on criteria you specify – directly from a mounted EDB or PST file. Search your database for specific keywords, or based on message dates, senders, recipients or subject matter.

ShadowProtect Granular Recovery for Exchange complements the award-winning StorageCraft ShadowProtect™ line of disk-based backup and disaster recovery solutions. Use point-in-time ShadowProtect backup images of an Exchange server and recover or migrate mailboxes, e-mail messages or e-mail attachments easily. By adding ShadowProtect Granular Recovery for Exchange to your existing ShadowProtect solutions, you have complete backup, system recovery and migration.

<sup>1</sup> Created using StorageCraft ShadowProtect Server or ShadowProtect Small Business Server.

## ShadowProtect Granular Recovery for Exchange Provides the Following Benefits:

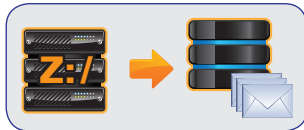

- Recover mailboxes, e-mail messages and e-mail attachments.
- Restore or migrate individual mailboxes quickly and easily.
- Search individual mailboxes or e-mail messages for specific keywords.
- Migrate users to a new version of Exchange with ease.
- Generate comprehensive reports for simplified management of Exchange.
- Use with ShadowProtect Server or ShadowProtect Small Business Server for complete Exchange backup, system recovery and migration.

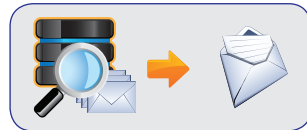

1. Create ShadowProtect backup image of an Exchange server

2. Assign a drive letter to ShadowProtect backup image

3. Access the Exchange EDB file

4. Recover, Migrate, Search - mailboxes, e-mail messages and e-mail attachments

## ShadowProtect Granular Recovery for Exchange System Requirements<sup>2</sup>

- Windows<sup>®</sup> 2000 Server, Windows 2000 Professional, Windows XP Professional, Windows Server 2003, Windows Vista Business, Windows Vista Ultimate or Windows Vista Enterprise
- Microsoft<sup>®</sup> Office Outlook 2000 or later
- Microsoft .NET Framework 2.0
- Intel<sup>®</sup> Pentium<sup>®</sup> class processor
- 1024 MB minimum RAM
- 200 MB of free hard disk space for installation<sup>3</sup>
- Monitor with VGA or higher resolution

<sup>2</sup> StorageCraft ShadowProtect Granular Recovery for Exchange supports Microsoft<sup>®</sup> Exchange Server 2000, Exchange Server 2003 and Exchange Server 2007.

<sup>3</sup> Additional space required for processing log files when opening EDB files.

## Save Time

Eliminate the time required to restore your entire Exchange database. Restore specific mailboxes, e-mail messages or e-mail attachments quickly with ShadowProtect Granular Recovery for Exchange. Restore just the mailboxes and files you need by dragging and dropping them from your EDB file backup to your production server or to a PST file.

## Save Money

Exchange migrations can be costly and frustrating. ShadowProtect Granular Recovery for Exchange allows you to migrate to your new Exchange server quickly and easily. Drag-and-drop mailboxes from your old Exchange database to your new production server in minutes. Upgrading Exchange will take hours, rather than days or weeks.

## Save Storage Space

ShadowProtect Granular Recovery for Exchange allows you to generate comprehensive reports so that you can identify and eliminate unnecessary mailboxes, e-mail messages and attachments to simplify Exchange management and minimize storage consumption.
